Individual Peer Evaluation

Evaluator: Yuan Haotong

Student ID: 523370910163

Group: 2

Partner: Zhao Tong

Partner Student ID: 523370910137

The following summarizes my contribution and my partner's contribution to each section. Scores are integers from 0 to 5.

Part	Your work	Your partner's work	Your score (0-5)	Your partner's score (0-5)
Section 2	Implemented the HLS multiplier and ALU, ran simulation and synthesis, developed the combinational RTL ALU baseline, and completed AXI integration and the Vivado/Vitis build.	Prepared the SD card, ran the multiplier and ALU tests on the board, and recorded the serial results.	5	3
Section 3	Prepared the boot image and checked its partitions and checksums.	Handled SD boot setup, checked the startup menu, tested interactive multiplication, and captured the results.	3	5
Section 4	Wrote the report description and limitations based on the supplied evidence.	Completed the PYNQ setup, including image writing, network sharing, Jupyter access, notebook execution, and screenshots.	3	5
Section 5 (optional)	Developed the pipelined RTL ALU and its AXI interface, integrated the replacement IP, and achieved timing closure at 100 MHz.	Ran the signed arithmetic and boundary tests on the board and captured the output.	5	3
Section 6	Wrote the four post-lab answers and the conclusions, using the implementation results and board evidence.	Supplied supporting measurements and captures and checked the reported numbers.	5	3
Section 7	Assembled and exported the final PDF report, prepared the evidence index, and checked the figure references.	Organized the board screenshots and serial log and committed them to the group repository.	5	3

Additional contribution notes

My main responsibilities were the hardware/software implementation and the final report, including the HLS blocks, RTL ALUs, system integration, build flow, and post-lab answers. Zhao Tong led the board testing and completed the PYNQ setup. For Sections 3 and 4, my role was limited to preparing the boot image and documenting the PYNQ results, respectively. His board captures supported the verification and report, and we reviewed each other's results before submission.
